

BRYAN WAGNER

Fraud Investigation • AI-Driven Security Operations • Adversary & Threat Intelligence

Tucson, AZ • (520) 912-0997 • bryanwagner00@gmail.com • [linkedin.com/in/bryan-wagner-cfe](https://www.linkedin.com/in/bryan-wagner-cfe) • wagzillion.github.io

PROFESSIONAL SUMMARY

CFE, CEH, and CCCI-certified security operations leader with 15+ years at Intuit. The pattern across my career is consistent: identify the gap, own the fix, leave something durable behind. Traced a P1 ATO campaign to a third-party platform through independent email header analysis when the source was unknown. Eliminated a 6,000+ alert takedown backlog that had no owner and established the SLA that governs it today. Built a 22-person frontline investigation team from zero infrastructure, hitting 99.3% service level and absorbing 108% call volume growth. Designed and deployed AI tools — including a fully automated batch QA review system — now in active use across T&S. My work lives at the intersection of deep fraud investigation, adversary intelligence, and AI-driven operational enablement.

CORE COMPETENCIES

ATO Investigation & Campaign Analysis • Adversary Infrastructure & TTP Analysis • AI Tooling & Workflow Automation • Security Incident Response • External Threat Takedowns • Fraud Detection Dashboard Development • Cross-Functional Enablement • Service Delivery Leadership • Investigator Training & QA Program Design

PROFESSIONAL EXPERIENCE

Senior Security & Risk Operations Analyst | Intuit Inc. 2022 – Present

Investigations Enablement & Service Delivery | Customer Trust & Risk Engineering & Compliance (CTREC)

Fraud Investigation & Incident Response

- Served as originating analyst on a P1 security incident (downgraded to P3 at closure) attributed to Fighting Ursa botnet infrastructure — independently identified the phishing source as a third-party marketing platform through email header analysis when the origin was unknown, initiated cross-company coordination with Square/Block for collaborative takedown, and owned customer communication through Legal and Marketing approval. The incident affected 957+ customers with \$800K+ in payment exposure; resolved to seasonal case volume norms following full remediation.
- Produced Director-level intelligence briefings throughout the incident lifecycle — structured packages covering adversary TTPs, financial exposure, case volume trends, and prioritized recommendations — giving leadership decision-ready insight under active threat conditions.
- Built fraud detection dashboards (SQL, Python, Databricks) surfacing ATO patterns, synthetic identity schemes, and typosquatting campaigns, enabling faster pattern identification and supporting proactive mitigation decisions by senior leadership.
- Conducted executive-facing Red Zone call volume impact analysis that directly debunked projected volume spikes and informed a product rollout decision — providing data-driven cover for a go/no-go call at the leadership level.
- Served as designated ATO training lead for Intuit Business Credit Card Risk Ops & Policy (~16 people, cross-BU) and separately onboarded 10+ investigators transitioning from Mailchimp post-acquisition — building training curricula from scratch in both cases.

AI Tooling, Automation & Operational Enablement

- Designed and deployed the T&S Career Growth Partner, a Claude-powered AI coaching tool enabling 12+ T&S professionals to produce rubric-aligned performance narratives, promotion packages, and peer feedback — reducing self-review drafting time by 40–60% and expanding access to structured career development coaching across the organization.
- Built and operationalized the Pega CAS ATO Quality Audit Program 2.0 — an AI-powered, fully automated batch QA review system developed in Cursor that replaced manual investigator-by-investigator review with a scalable, repeatable quality assurance pipeline across frontline ATO investigation workflows.

- Built the Work Radar agent, an AI-driven workflow integrating Claude with Jira, Slack, Outlook, and Google Drive APIs to automatically surface untracked work signals and pre-populate tickets — logged 26 stories across 10 work domains in a single two-week sprint, on pace to formally track 500+ work items annually.
- Automated Notice of Change processes and investigation workflows saving \$750K+ annually and eliminating 200+ FTE hours of manual work; leveraged AWS Connect, Splunk, and Python for pipeline automation.
- Built the Elevate Page from scratch — a purpose-built knowledge and communication hub housing resource libraries, SOP access, and operational tooling in a single destination that did not previously exist. Contributed to a 30% reduction in investigation processing time through workflow automation and service delivery standardization built around it.
- Developed and deployed investigative dashboards in Databricks and Qlik (SQL, Python) tracking ATO incident volume, adversary campaign progression, and case resolution velocity — providing always-on operational visibility and supporting executive-level reporting during active incidents.

External Threat & Takedown Operations

- Own external threat takedown operations end-to-end across two platforms (legacy and next-gen): personally actioned 5,400+ alerts, eliminated a 6,000+ alert backlog, and established a 2-business-day SLA where none previously existed. Led the full platform migration including SOP development, automation rubric co-design with Threat Intelligence, and cross-team triage workflow design covering domains, social media, phishing kits, dark web, and paid ad abuse. Trained 5 additional analysts and served as ongoing operational owner for platform health and coverage.

CAP PE Team Build-Out & Service Delivery

- Built the Customer Account Protection PE team from zero: 22 people, no prior infrastructure — tiered workflows, Pega rollout and permissions, SOPs, and training for 18 frontline investigators, 2 managers, 1 trainer, and 1 QA lead. The team hit 99.3% service level, 1.2% abandonment rate, 23-min AHT, and NPS of 37, with weekly call volume increasing 108% from launch.
- Operational POC for two frontline investigation teams (11-person ATO squad and 16-person Tech Support Fraud squad), owning escalation workflows, quality oversight, training, and day-to-day coordination across 27 analysts.
- Partnered on IVR/IVA routing logic that identifies ATO-impacted customers and routes them to specialized teams based on money entitlement status — projected to eliminate ~780 misrouted contacts/month and reduce handle time by 1M+ seconds/month.

Progressive Roles: Payments, Risk Ops, CX & Technical Support | Intuit Inc. 2011 – 2022

Payment Operations | Risk Operations | Customer Experience | Technical Support

- Advanced through five roles with increasing scope across fraud detection, risk operations, payments, and support leadership over 11 years — contributing to Stripe Payments integration, Salesforce CRM migration, and early fraud mitigation frameworks that informed current T&S service delivery models.
- Led automated Notice of Change project saving \$750K annually and eliminating 200+ FTE hours of manual work; coordinated multi-team incident response supporting 127,000+ merchants during a critical payments outage, restoring service within hours.
- Served as sole Payments Facilitator in Tucson, training 4 waves of specialists; received Q2 Excellence Award and recognition at Assisted Services All-Hands for outstanding customer experience contributions.
- Led Risk processes for the Stripe Payments Project; supported partner Tier 2 agents as Tier 3; selected to work with engineers on the Awesome Agent Experience moving Payroll Services Platform to Salesforce.

TECHNICAL SKILLS & TOOLS

Languages: SQL, Python

Platforms: Databricks, Splunk, AWS (Connect), Pega, Salesforce, Jira, Confluence, ServiceNow, Qlik

AI & Automation: Claude (Anthropic), Cursor / Claude Code, MCP Integration, Custom GPTs, Splunk MCP Service Account, Workflow Automation

Threat Intelligence: External Threat Takedown Platforms, OSINT, Email Header Analysis, Phishing Infrastructure Analysis, Adversary TTP Analysis

Domains: ATO, Synthetic Identity Fraud, Tech Support Fraud, Phishing Campaigns, Typosquatting, IVR/IVA Routing, Investigator Enablement, Fraud Dashboard Development

CERTIFICATIONS

- Certified Fraud Examiner (CFE), ACFE | Exp. June 2027
- Certified Ethical Hacker (CEH), EC-Council (90th Percentile Pass Rate) | Exp. May 2027
- Certified Cyber Crimes Investigator (CCCI), IAFCI | Exp. Sept. 2028

EDUCATION

Bachelor of Science in Cybersecurity | Southern New Hampshire University (SNHU) | In Progress

- Dean's List, C-1 2026 (January–March 2026)
- Dean's List & President's List, C-2 2026 (March–April 2026)
