CFE | CEH | CCCI

Senior Security Operations | Fraud Investigation, Adversary Intelligence & AI-Driven Enablement

Tucson, AZ • (520) 912-0997 • bryanwagner00@gmail.com • linkedin.com/in/bryan-wagner-cfe • wagzillion.github.io

PROFESSIONAL SUMMARY

CFE, CEH, and CCCI-certified security operations leader with 15+ years at Intuit spanning fraud investigation, adversary intelligence, and policy. The pattern is consistent: find the gap, own the fix, leave something durable behind. Serve as validation authority for Intuit's Adversary Management team, catching false-positive enforcement risks and escalating identity fraud to law enforcement liaison; produce original threat intelligence from 550,000+ records surfacing new adversary clusters and activity shifts. Authored the BRD that redefined Intuit's ATO call routing after data showed only 20% of calls reaching the correct queue against roughly $2M/month in exposure, now credited with eliminating around 780 misrouted calls a month. Authored the Policy Lead framework governing Intuit's CAP investigator quality program and led the technical briefing that shaped VP-level response strategy during a P3 phishing incident tied to the Fighting Ursa botnet, protecting 957+ affected customers. I also build the AI tooling that scales this work past what any one investigator could do alone.

CORE COMPETENCIES

ATO Investigation & Adversary Attribution • Security Incident Response & Threat Intelligence • AI-Powered Quality & Workflow Automation • BRD/PRD Authorship & Cross-Functional Product Influence • External Threat Takedown Operations (Doppel, ZeroFox) • Investigator Training & Enablement • Fraud Detection Dashboard Development • Service Delivery Leadership

PROFESSIONAL EXPERIENCE

Senior Security & Risk Operations Analyst | Intuit Inc. 2022 - Present

Customer Account Protection | Trust & Safety, Customer Trust & Risk Engineering & Compliance (CTREC)

Fraud Investigation & Case Forensics

- Conduct hands-on account takeover (ATO) case forensics: resolving identity across multiple linked auth ID aliases, reconciling data lake evidence against Salesforce case sprawl, and distinguishing real attacker infrastructure from false positives, including correctly identifying a device flagged as "blocked" as the victim's own long-lived browser fingerprint rather than attacker infrastructure, preventing an incorrect lockout of the legitimate customer.
- Query production fraud data systems directly via SQL to trace exactly which automated system or policy triggered a given account deactivation when the audit trail is ambiguous, and correctly triage escalations between genuine security incidents and standard credential issues, e.g. closing an escalated "cannot log in" case back to CARE after tracing the full password-reset and login audit trail rather than consuming Trust & Safety investigative resources on a non-security issue.
- Root-caused a production Auth ID deactivation failure, recurring 503 errors from a backend authentication service, that was forcing investigators to resubmit takedown referrals up to three times per case; partnered directly with engineering to confirm the fix and revised team guidance to prevent the resulting duplicate case volume.
- Catch and correct inaccurate "case closed, fully secured" assumptions before they reach downstream teams by cross-referencing device risk signals, Auth ID status, and open Salesforce case counts across a customer's full case history, reducing rework and repeat customer contact on complex, post-ATO accounts.

Fraud Trend Analysis & Adversary Intelligence

- Serve as validation authority for Intuit's Adversary Management team on proposed social media enforcement automation rules (projected 40% reduction in the QuickBooks social media enforcement backlog): caught a critical false positive risk that would have incorrectly targeted legitimate ProAdvisor content, and escalated one rule to law enforcement liaison after identifying bundled identity fraud indicators.
- Produced original threat intelligence from 550,000+ records, identifying a geographic signal shift in adversary activity, a new coordinated QuickBooks affiliate impersonation cluster, and a piracy-post virality spike at 4x the all-time engagement baseline, feeding directly into takedown prioritization.
- Authored the VP-level technical intelligence briefing during a P3 phishing incident attributed to Fighting Ursa botnet infrastructure using evilginx man-in-the-middle architecture, explaining why the reverse proxy defeated MFA by hijacking session tokens rather than credentials, directly shaping leadership's understanding of severity and response strategy. The incident affected 957+ customers, 359+ confirmed ATO fraud victims, and $844K+ in payment exposure in a single month.
- Drove the cross-functional customer notification workstream, coordinating Legal, Corporate Communications, and the In-Product Discovery (IPD) team to deliver notifications across QBO, QBOA, and IES; separately owned customer communications for a related malware distribution campaign reaching 530,000+ recipients, coordinating notifications to 4,264 Intuit and 1,088 non-Intuit customers.
- Independently identified an unknown phishing source as a third-party marketing platform through email header analysis, initiating cross-company coordination with Square/Block for collaborative takedown.

Policy & Governance

- Authored the CAP Quality Program Framework using a Policy Lead structure (Company Risk to ATO Strategy to Domain Analysis to Goals & Initiatives) to define outcome metrics and risk-severity tiers, e.g. flagging an absent identity-proofing check and a missing case-tracking requirement as High-severity gaps, across the investigator quality function.
- Proactively identified that a partner risk team's referral intake form was routinely missing required fields (contact information, dollar loss, event timing, affected product), causing $0 loss cases and investigator time lost tracking down details across Salesforce and other case systems; escalated directly to the team's leadership with the specific fields required and drove a change to their intake process.

- Authored a work overview mapping five active workstreams (executive escalations, the Quality Program, contingent workforce coordination, Adversary Management partnership, and Project CLEAR); identified that executive escalation cases had no single routing path, tagged across four Slack channels with no SLA or audit trail, and scoped the CAP escalation SOP now underway as an FY27 priority.

Product Influence: ATO Call Routing

- Authored the BRD and strategy (Jira IVAC-3066) for IVA-based ATO routing after data analysis showed only 20% of ATO-related calls were reaching the correct fraud or risk queue, an estimated $2M/month in financial exposure; the strategy was adopted into formal product requirements now owned by the Risk Experience Product team.
- Named a required approver on the 100% ramp decision. The resulting routing logic is credited with eliminating approximately 780 misrouted calls/month, cutting handle time by 1M+ seconds/month, reducing average contacts per customer from 3 to 1, and improving reactivation rates from roughly 1-in-3, recognized in an org-wide SVP-level ShippedIt.

AI Tooling, Quality Programs & Automation

- Conceived, built, and own the **Pega CAS ATO Quality Audit Program** as Quality Lead: an AI-powered, four-pillar, 100-point scoring system (Operational Performance, Investigative Validation & Research, Decisioning & Accuracy, Communication & Documentation) covering 18 CAP investigators and the Foundever partner team, with a formal appeal process, automated report generation, and Smartsheet write-back.
- Co-authored a vision brief proposing a real-time coaching extension of the Quality Audit rubric inside T&S Assist, validated through Project NERVE working sessions; separately authored a vision brief on early-detection, duplicate-safe case boosting from the executive escalation inbox.
- Designed and deployed the **Trust & Safety Growth Partner**, an AI-powered career development tool adopted organically across T&S job families; built and delivered a 90-minute org-wide workshop and all-staff presentation on its use, reducing self-review and promotion-package drafting time by 40 to 60 percent. Built the **Work Radar** agent (Claude plus Jira, Slack, Outlook, and Google Drive) to surface untracked work signals, logging 26 stories across 10 work domains in a single two-week sprint.

Investigator Training & Enablement

- Built the complete training infrastructure, including the CAP ATO Frontline SOP, a dedicated CAP PE SOP, a structured case template, and a Slack peer-support workflow, that brought 11+ investigators transitioning from Mailchimp/Tech Support Fraud to full ATO investigative readiness.
- Authored a data-driven ATO Investigation Enablement Gaps analysis for Risk Ops, quantifying duplicate case creation (roughly 30% of Money authentication sessions) and low-quality case referrals directly from case data to justify targeted training, tooling, and process investment; served as designated ATO training lead for Intuit Business Credit Card Risk Ops & Policy (approximately 16 people, cross-BU).

External Threat Takedown & Team Build-Out

- Own external threat takedown operations end to end across two platforms, legacy and Doppel/ZeroFox next-gen: personally actioned 5,400+ alerts, eliminated a 6,000+ alert backlog, and established a 2-business-day SLA where none previously existed. Authored the CAP Enforcement Referrals SOP, built the facilitator training deck for new CAP investigators, led the ZeroFox-to-Doppel migration, and trained 5 additional analysts.
- Built the Customer Account Protection PE team from zero: 22 people, tiered workflows, Pega rollout, SOPs, and training for 18 investigators, 2 managers, 1 trainer, and 1 QA lead, reaching 99.3% service level while absorbing 108% call volume growth; operational point of contact for two frontline investigation teams (27 analysts total).

Progressive Roles: Payments, Risk Ops, CX & Technical Support | Intuit Inc. 2011 - 2022

Payments Supportability Specialist (2019-2022) • CX Lab Specialist, Payments (2017-2019) • Payroll Support (2014-2017) • Merchant Services (2011-2014)

- Advanced through five roles with increasing scope across fraud detection, risk operations, payments, and support leadership, contributing to the Stripe Payments integration, the Salesforce CRM migration, and the fraud mitigation frameworks that inform current Trust & Safety service delivery models.
- Led the automated Notice of Change project, saving $750K annually and eliminating 200+ FTE hours of manual work; coordinated multi-team incident response supporting 127,000+ merchants during a critical payments outage, restoring service within hours. Served as sole Payments Facilitator in Tucson, training 4 waves of specialists; received the Q2 Excellence Award.

TECHNICAL SKILLS & TOOLS

AI & Automation: Claude (Anthropic), Custom GPTs, Cursor / Claude Code, MCP integration, workflow automation pipelines

Languages & Querying: SQL, Python

Platforms: Databricks, Splunk, AWS Connect, Pega, Salesforce, Jira, Confluence, ServiceNow, Qlik, Smartsheet

Threat Intelligence: Doppel, ZeroFox, OSINT, email header analysis, phishing infrastructure analysis, adversary TTP analysis

Domains: ATO investigation, synthetic identity fraud, phishing campaign response, IVR/IVA routing architecture, investigator enablement, fraud dashboard development

CERTIFICATIONS

- Certified Fraud Examiner (CFE), Association of Certified Fraud Examiners, exp. June 2027
- Certified Ethical Hacker (CEH), EC-Council, 90th percentile pass rate, exp. May 2027
- Certified Cyber Crimes Investigator (CCCI), IAFCI, exp. Sept. 2028

EDUCATION

Bachelor of Science in Cybersecurity | Southern New Hampshire University | In Progress | Dean's List and President's List, 2026
